Christopher Sparling

Toronto, Ontario
(289) 716-8255
cjsparli@edu.uwaterloo.ca
christophersparling.io

Skills

Languages	R, Python, SQL, C++
Libraries	tidyverse, keras, caret, scikit-learn, numpy, scipy, pandas, beautifulsoup
Tools	git, SSMS, Linux, Command Line
Familiar With	Azure, classification, regression, RESTful APIs, AWS

Work Experience

Litens Automotive Group — Jan – April, Sept – Dec 2018

Application Developer – Vaughn, Ontario

- Oversaw design, development and deployment of an internal application serving as a replacement QA document management system using Microsoft's cloud offerings
- Application reduced office waste and improved critical document availability to machine operators
- Created deployment strategy for equivalent applications aimed at other Litens manufacturing sites

Business Analyst / IoT Developer – Vaughn, Ontario

- Developed PoC **IoT** data pipeline for predictive analytics initiative aimed at reducing machine downtime and increasing maintenance team effectiveness
- Migrated KPI visualizations from legacy system to **Power BI** with **Azure**, redesigning data storage solution to improve performance in new platform

Karat — Aug 2017 – Present

Code Grader – Remote [Seattle, Washington]

- Oversaw manual and automatic testing of **1000+** code submissions in languages such as **Python**, **R**, and **SQL**

Climax Media — Sept 2016 – Dec 2016

QA Automation Co-op – Toronto, Ontario

- Tested and loaded large-scale CMS using **SQL** and **DB2** for high-end automotive client

Concord Screen — Jan 2016 – Apr 2016

Mechanical Engineering Co-op – Newmarket, Ontario

- Operated as scientific **research lead** and oversaw preliminary redesign of company product, taking the project from infancy to testing various prototypes

Notable Projects

Bimodal Gender Predictor Based on Personality

- **Rmd** notebook-based project that takes in the ~20k personality assessment responses, training and scoring various machine learning algorithms such as **MDA**, **SVM**, and **kNN**
- Analyzes variations in personality between men and women, and by race
- Enables users to complete quiz themselves and generate predictions from the assorted models

MMA Combo Assistant

- Built with Python, generates random sets of combos from pre-defined choices then reads them out with artificially generated speech files
- Widely configurable; everything from round length, to moves included in the set, to break length

Pokémon Dataset Analysis

- A **Jupyter notebook** based data analysis of hosted dataset using **R**'s **ggplot2** and additional **tidyverse** packages as visualization and data cleaning tools
- Explores spread of stats across the various primary and secondary types and correlation between stats
- Predicts highest stat based on type combination

Classification Algorithm Comparison

- An RMd notebook with exploratory analysis, cleaning and visualization of Wisconsin Breast Cancer [Diagnostic] Dataset
- Uses **caret**, **corrplot**, and **tidyverse** to compare accuracy, precision, and recall of various ML classification algorithms including Naïve Bayes, kNN, Random Forest, SVM, and Decision Tree

Independent Coursework

Data Scientist with R

by DataCamp — Certificate #10131

Education

B.ASc. - Mechatronics Engineering — 2015 – 2020

University of Waterloo
